

# BRITISH SCIENCE WEEK 2018

## NURSERY

Frankie was really enjoying watching the chicks and said "they peck their food".

Eve speaking about the tadpoles "there are thousands; I think they are moving on their own". Eve was very excited to see them and said "tadpoles are black"

The children have had a fantastic science week completing many tasks. The children have had the experiences of seeing new born chicks hatch from the eggs in the incubator. They have thoroughly enjoys watching the chicks move and have had the chance to hold them. Taking fantastic observation and talking about their findings. Nursery children have also learnt the cycle of a plant. They have stuck pictures onto work sheets to show the plant cycle and have had the chance to grow their own cress using cotton wool and cress seeds. They have learnt the importance of water and sunlight and have been able to watch the cress grow tall and green. After an exciting science week all the children have also got to see frog spawn. Many of the children described the frog spawn as jelly, but not the kind of jelly they would like to eat!
