

BRITISH SCIENCE WEEK 2018

YEAR 1

'It was fun in the conservation area.' - Mylo

'I discovered that wild plants just grow on their own.' - Hollie

'I found there are lots of different flowers in the conservation area.' - Lily

'We discovered that in spring not many plants grow.' - Indie

'I liked to find out what floated and what sank.' - Tyler

Year 1 have been learning about plants this half term. During Science Week, we learned the names of common wild plants and also learned what they look like. We then visited the conservation area to record which of the wild plants we could see growing there. We made tally charts of the information. Later, we learned about some of the common trees of Britain and returned to the conservation area to collect fresh and dead leaves. Once back in the classroom, we compared our leaves to pictures of leaves to find out which types of trees we have. In addition to our topic work, we learned about floating and sinking. We found out whether objects float or sink and did the fun experiment of watching raisins rise up and down in fizzy pop.
