

The children were interested in the Leaning Tower of Pisa and so we challenged ourselves to build ramps and towers which leaned without falling over!

\*We continued to think about buildings in other places. *If we travelled to far off lands, what kinds of buildings would we see? What materials do they use? Why?*

\*We looked at different kinds of buildings there. *What are these buildings made of? What are they for? How are they the same or different?*

\*We began to think about the different materials that we could build with and how they might best be used. *What kinds of structures can we build with sand, rocks, sticks etc.*

\*We thought about how we might document our findings in drawings, photographs, sketches and reports.

"The stones had curved edges... they didn't fit together! It was hard to build with the sticks because they were a cylinder shape and kept rolling." (Hugo)
