

BRITISH SCIENCE WEEK 2019

YEAR Nursery

PHOTO

Arlo said the cress needs "seeds, water, sun, rain and soil" to grow

Ava said "water makes the seeds grow".

We have grown cress for our science experiment in nursery and have enjoyed watching the seeds germinate. We have learnt the importance of water and sunlight and have been able to watch the cress grow tall and green.

We have also learnt all about space based on our treasured text 'Whatever next'. We learnt lots of facts about the moon and did an experiment of dropping marbles into a bowl of flour to replicate the craters on the moon. We also had a go at baking space biscuits for our pretend picnic on the moon. The children have also been busy painting planets.

"The moon is made from rock" said Mikey.

"The moon has holes called craters" said Ivy.

"We used butter, flour, sugar and milk" for our ingredients to make the biscuits said Mili.
