

Space Week 2020

During Space Week, we carried out a variety of different activities in English, reading, Science and Maths. In English, we focused on a video called 'Space Monkey', which depicted a chimp's travels to space and his return. In reading, we focused on the same video and worked together to infer the chimp's feelings and put ourselves in the chimp's position. During maths, Y6 studied the diameter of planets and rounded these numbers, problem solved and found the difference between planet temperatures. Our STEM activities focused on balloon rockets and Eggnauts where the children had to consider Newton's Law of Motion. In addition this, we measured the distance that our balloon rockets travelled and found the mean, median, mode and range of our distances throughout the class.
