

Science Week in Year 3

In Year 3 we looked at gravity and flight. We followed some instructions to make a simple paper aeroplane to see who could fly it the furthest.

We measured the distances and then, we researched what would make the aeroplane fly further.

We looked at angles, the power we threw the plane, the shape of the wings, if the plane needed a tail or other features adding onto our planes.

We also had a visit from Mr Davies. He is a blood scientist who looks at blood cells through a microscope. His job is to help people get better.

We learned all about red blood cells, white blood cells and platelets.

We also got chance to look through as microscope at some blood cells.

The microscope made the blood look 400 times bigger.

They have to use purple dye to help see the white blood cells.
